HOW DOES IT WORK?

Before and After

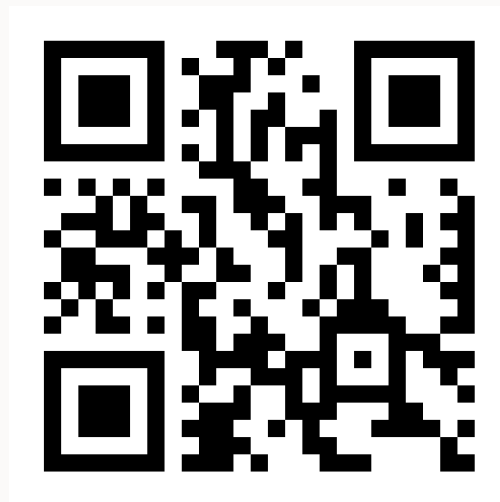

Before and After

- Hair Bare Pro enhances other advanced facial treatments such as Radio Frequency, Micro-current, Cold Plasma, Skin Needling, and Enzyme Peels. By using Hair Bare Pro before these treatments, it prepares the skin by gently exfoliating and removing fine vellus hair, which allows better penetration of energy or products used during these procedures.
- A Multi-Benefit Facial Treatment Hair Bare Pro is not just a hair removal solution; it can also be transformed into a luxurious facial treatment that exfoliates, brightens, and smoothens the skin. This multi-benefit approach makes Hair Bare Pro highly effective and versatile for various client needs.
- After years of research, it was apparent that traditional depilatory creams often resulted in adverse reactions such as hyper/hypopigmentation, scarring, and burns. Hair Bare Pro, developed through extensive research and clinical trials, was created as a safe and effective alternative. Now, clients can confidently enjoy smooth, hair-free skin without the risks associated with other hair removal methods.
- A Unique, Relaxing Experience Hair Bare Pro is a pain-free, relaxing, and even enjoyable experience, enhanced with soothing ingredients and calming scents. During the treatment, clients are treated to a neck and shoulder massage while the skin is re-balanced to its optimal pH of 5.5. This holistic approach to hair removal sets Hair Bare Pro apart from other treatments, combining results with relaxation and wellbeing.
- In today's fast-paced world, multi-benefit treatments like Hair Bare Pro—offering hair removal, exfoliation, skin brightening, and relaxation all in one—are quickly becoming the future of beauty.

- By using a concentrated alkaline powder, Hair Bare Pro raises the pH level of the skin, triggering a chemical reaction that breaks down the hair's protein structure, leading to immediate hair removal.
- When the Remove & Smooth Alkaline Powder is mixed with Rose water/Distilled, it transforms into a transdermal solution capable of penetrating deep into the hair follicle. This allows it to reach the hair bulge, where it damages stem cells, ultimately disabling the hair follicle's ability to regenerate. Over a course of treatments, clients will notice the hair becomes finer, grows slower, and appears shorter, particularly effective for vellus hair on the face, which laser and IPL treatments cannot effectively address.
- Additionally, the alkaline solution gently exfoliates the skin by breaking down skin proteins, helping to reduce scarring, pigmentation, acne, ingrown hairs, and even fine wrinkles.
